NEW QUESTION: 1You installed WebLogic, SOA Suite, and Oracle Service Bus on a machine and want to use the WebLogic Node Manager to start servers for each product. Which statement is true?**A.** You need to install and configure a separate Node Manager for each domain of each product want to run on the machine.**B.** You need to install and configure only one instance of Node Manager for all products, regardless of the WebLogic version number.**C.** You need to install one Node Manager but use separate SSL certificates for each product when securing the network communication to the machine.**D.** You need to install a separate node manager for each Middleware Home that has a unique and minor WebLogic Version Number.**Answer: B**
Explanation:Note:*A Node Manager process is not associated with a specific WebLogic domain but with a machine. You can use the same Node Manager process to control server instances in any WebLogic Server domain, as long as the server instances reside on the same machine as the Node Manager process. Node Manager must run on each computer that hosts WebLogic Server instances-whether Administration Server or Managed Server-that you want to control with Node Manager.*In managing multiple servers, Node Manager uses multiple configuration files and outputs log files to multiple directories.*nodemanager.domains This file contains mappings between the names of domains managed by Node Manager and their corresponding directories.*Node Manager in the WebLogic Server EnvironmentReference; Node Manager Administrator's Guide for Oracle WebLogic Server 12c
