NEW QUESTION: 1 A Symantec Messaging Gateway 10.5 administrator needs to prevent bounce attacks. Where should the administrator enable this feature? **A.** Antispam policy **B.** Bad Senders policy **C.** Directory Harvest Attack policy **D.** Antivirus policy **Answer: A**

NEW QUESTION: 2 Protocols that are typically monitored in TCP/IP networks by visibility tools include (Select 3): **A.** UDP Protocols such as SMTP and Video streaming **B.** SAN HBA Protocol **C.** TCP Protocols such as HTTP and HTTPS **D.** IPv4 Protocols including TCP, UDP, and ICMP **E.** IPv4 Protocols such as x.25, TTY and TTL **Answer: A,C,D**

NEW QUESTION: 3 You have a container image that contains an AI solution. The solution will be used on demand and will only be needed a few hours each month. You plan to use Azure Functions to deploy the environment on-demand. You need to recommend the deployment process. The solution must minimize costs. Which four actions should you recommend Azure Functions perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer: Explanation: Explanation** 1. Create ACI 2. pull image 3. run AI solution 4. delete ACI

NEW QUESTION: 4 Consider a portfolio with a large number of uncorrelated assets, each carrying an equal weight in the portfolio. Which of the following statements accurately describes the volatility of the portfolio? **A.** The volatility of the portfolio will be close to zero **B.** The volatility of the portfolio is the same as that of the market **C.** The volatility of the portfolio will be equal to the weighted average of the volatility of the assets in the portfolio **D.** The volatility of the portfolio will be equal to the square root of the sum of the variances of the assets in the portfolio weighted by the square of their weights **Answer: D** **Explanation: Explanation** When assets are uncorrelated, variances are additive. But volatility (which is standard deviation) is not. In the given situation, the total variance of the portfolio will be equal to the the square root of the sum of the variances of the assets in the portfolio weighted by the square of their weights. Its volatility will be the square root of this variance. Thus Choice 'c' is the correct answer. (This is because $V(cA + dB) = c$
