NEW QUESTION: 2 **HOTSPOT** Your network contains an Active Directory domain named contoso.com. The network contains two subnets. The subnets are configured as shown in the following table: The network contains a member server named Server1 that runs Windows Server 2012 R2. Server1 has the DHCP Server server role installed. Server1 is configured to lease IP addresses to the two subnets. You add three new printers to the Warehouse subnet. The printers have static IP addresses. The IP addresses are consecutive. You need to create an exclusion range that contains the IP addresses of the printers. From which node should you configure the exclusion range? To answer, select the appropriate node in the answer area.

Answer: Explanation:

NEW QUESTION: 3 **Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run

Windows 10. On Server1, you have the following zone configuration. You need to ensure that all of the client computers in the domain perform DNSSEC validation for the fabrikam.com namespace. Solution: From a Group Policy object (GPO) in the domain, you add a rule to the Name Resolution Policy Table (NRPT). Does this meet the goal? **A. No** **B. Yes** **Answer: B**

Explanation: The NRPT stores configurations and settings that are used to deploy DNS Security Extensions (DNSSEC), and also stores information related to DirectAccess, a remote access technology. Note: The Name Resolution Policy Table (NRPT) is a new feature available in Windows Server 2008 R2. The NRPT is a table that contains rules you can configure to specify DNS settings or special behavior for names or namespaces. When performing DNS name resolution, the DNS Client service checks the NRPT before sending a DNS query. If a DNS query or response matches an entry in the NRPT, it is handled according to settings in the policy. Queries and responses that do not match an NRPT entry are processed normally.
