We adhere to the concept of No Help, Full Refund, which means we will full refund you if you lose exam with our SAP C-S4CS-2308 exam pdf.

**NEW QUESTION: 1**You are a network administrator in charge of configuring CoS for your network. Your network includes a voice application with strict latency requirements, so that any packets delayed by more than 75 ms are effectively useless. When configuring the scheduler for this application, which feature ensures that you do not waste buffer space?**A.** latency-limit**B.** adaptive**C.** temporal**D.** rate-limit**Answer: C**

**NEW QUESTION: 2**An external customer provides you with a daily dump of data from their database. The data flows into Google Cloud Storage GCS as comma-separated values (CSV) files. You want to analyze this data in Google BigQuery, but the data could have rows that are formatted incorrectly or corrupted. How should you build this pipeline?**A.** Import the data into BigQuery using the gcloud CLI and set max\_bad\_records to 0.**B.** Run a Google Cloud Dataflow batch pipeline to import the data into BigQuery, and push errors to another dead-letter table for analysis.**C.** Enable BigQuery monitoring in Google Stackdriver and create an alert.**D.** Use federated data sources, and check data in the SQL query.**Answer: B****Explanation:**Topic 1, Flowlogistic Case StudyCompany OverviewFlowlogistic is a leading logistics and supply chain provider. They help businesses throughout the world manage their resources and transport them to their final destination. The company has grown rapidly, expanding their offerings to include rail, truck, aircraft, and oceanic shipping.Company BackgroundThe company started as a regional trucking company, and then expanded into other logistics market. Because they have not updated their infrastructure, managing and tracking orders and shipments has become a bottleneck. To improve operations, Flowlogistic developed proprietary technology for tracking shipments in real time at the parcel level. However, they are unable to deploy it because their technology stack, based on Apache Kafka, cannot support the processing volume. In addition, Flowlogistic wants to further analyze their orders and shipments to determine how best to deploy their resources.Solution ConceptFlowlogistic wants to implement two concepts using the cloud:\* Use their proprietary technology in a real-time

inventory-tracking system that indicates the location of their loads\* Perform analytics on all their orders and shipment logs, which contain both structured and unstructured data, to determine how best to deploy resources, which markets to expand info. They also want to use predictive analytics to learn earlier when a shipment will be delayed.Existing Technical EnvironmentFlowlogistic architecture resides in a single data center:\* Databases\* 8 physical servers in 2 clusters\* SQL Server - user data, inventory, static data\* 3 physical servers\* Cassandra - metadata, tracking messages10 Kafka servers - tracking message aggregation and batch insert\* Application servers - customer front end, middleware for order/customs\* 60 virtual machines across 20 physical servers\* Tomcat - Java services\* Nginx - static content\* Batch serversStorage appliances\* iSCSI for virtual machine (VM) hosts\* Fibre Channel storage area network (FC SAN) - SQL server storage\* Network-attached storage (NAS) image storage, logs, backups\* Apache Hadoop /Spark servers\* Core Data Lake\* Data analysis workloads\* 20 miscellaneous servers\* Jenkins, monitoring, bastion hosts,Business Requirements\* Build a reliable and reproducible environment with scaled panty of production.\* Aggregate data in a centralized Data Lake for analysis\* Use historical data to perform predictive analytics on future shipments\* Accurately track every shipment worldwide using proprietary technology\* Improve business agility and speed of innovation through rapid provisioning of new resources\* Analyze and optimize architecture for performance in the cloud\* Migrate fully to the cloud if all other requirements are metTechnical Requirements\* Handle both streaming and batch data\* Migrate existing Hadoop workloads\* Ensure architecture is scalable and elastic to meet the changing demands of the company.\* Use managed services whenever possible\* Encrypt data flight and at rest\* Connect a VPN between the production data center and cloud environment SEO Statement We have grown so quickly that our inability to upgrade our infrastructure is really hampering further growth and efficiency. We are efficient at moving shipments around the world, but we are inefficient at moving data around.We need to organize our information so we can more easily understand where our customers are and what they are shipping.CTO StatementIT has never been a priority for us, so as our data has grown, we have not invested enough in our technology. I have a good staff to manage IT, but they are so busy managing our infrastructure that I cannot get them to do the things that really matter, such as organizing our data, building the analytics, and figuring out how to implement the CFO' s tracking technology. CFO StatementPart of our competitive advantage is that we penalize ourselves for late shipments and deliveries. Knowing where out shipments are at all times has a direct correlation to our bottom line and profitability. Additionally, I don't want to commit capital to building out a server environment.

### NEW QUESTION: 3

複数のサーバーへのWindowsServer2008のインストールを自動化する必要があります。何をすべきですか？**A.** Microsoft Software Installer (MSI)**B.** unattendinstall.exe**C.** Windows Deployment Services (WDS)**D.** Windows Installer Service**Answer: C**
