This is the output of the `GetResults()` function. We decrease the Duration in the cache for this function from 3600 to 30. This is one line 12.A: They report seeing other user's name when they sign in to the application. This is the output of the `GetUserInfo()` function. We should change the `OutputCacheLocation` of the caching of this function from Server to Client. This is on line 7.**Note:** The `OutputCacheLocation.Client` option indicates that the content should be cached at the requesting client. Any requests for the same resource made from the same client within the expiry period, will be served out the client's cache, without a network request being made to the server. The `OutputCacheLocation.Server` option

indicates that the content will be cached at the origin server. This content will be served for subsequent requests made by the initial client and any other client requesting the same resource within the expiry period. References:
