**NEW QUESTION: 3** Testlet: Graphic Design Institute, Case B You are designing a Windows Server 2008 R2 deployment strategy for the Minneapolis campus servers. Which deployment strategy should you recommend? Case Study Title (Case Study): General Background You are the systems administrator for the Graphic Design Institute (GDI). GDI is a private liberal arts and technical college with campuses in multiple cities. Technical Background The campus locations, users, client computers, and servers are described in the following table. The campuses are connected by a fully meshed WAN. The corporate network includes Active Directory Domain Services (AD DS). Domain controllers are located on each campus. GDI uses Microsoft Windows Deployment Server (WDS) to distribute images by using Preboot Execution Environment (PXE). GDI builds images by using the Windows Automated Installation Kit (WAIK). GDI uses Microsoft Windows Server Update Services (WSUS) to distribute and manage Windows security updates and software updates. All private client computers and portable computers used by faculty and staff are members of the WSUS computer group named Staff. All shared client computers are

members of the WSUS computer group named LabComputers. All faculty and staff users are members of the global security group named GDI\_Staff. All students are members of the global security group named GDI\_Students. Specific servers are configured as shown in the following table. The main data center is located on the Boston campus. ADMX and ADML files are centrally stored on BODC01. All Charlotte servers reside in the CH\_Servers organizational unit (OU). CHDATA01, CHDATA02, CHDATA03, and CHDATA04 reside in the CH\_FileServers OU. CH\_FileServers is a child OU of CH\_Servers. A Group Policy object (GPO) named ServerSettings applies Windows Internet Explorer settings to all servers. Business Requirements After successful migrations to Windows Server 2008 R2 in Boston, New Haven, and Tacoma, GDI plans to migrate its other campuses to Windows Server 2008 R2 in advance of a full Windows 7 client computer deployment. Server deployment on the Austin campus must be performed on weekends by using scheduled deployments. The post-migration environment must meet the following business requirements: Maximize security. Maximize data protection. Maximize existing resources. Minimize downtime. Technical Requirements The post-migration environment must meet the following security requirements: All updates must be distributed by using WSUS. All critical updates must be installed as soon as possible. All drives on the Minneapolis campus servers must have Windows BitLocker Drive Encryption enabled. The post-migration environment must meet the following data protection requirements: All servers must have automated backup routines. All backups must be replicated to the Boston data center at the end of each business week. The post-migration environment must meet the following resource requirements: Installations and recovery must be performed remotely. All department volumes on file servers must have NTFS quotas. Minimize download time for users who open Microsoft Office documents over the WAN. Ensure that users' files are always opened from the closest file server when available. Users' files must be accessible by the same path from all campuses. **A.** Use multicast image deployment. **B.** Use a discover image in WDS. **C.** Install from media. **D.** Auto Add from Policy. **Answer: A** Explanation: Explanation Explanation/Reference: Option A (Install from media) is ruled out as it only applies to installation of domain controller to minimize the WAN traffic for AD replication. Option B (Use a discover image in WDS) is excluded because it is reserved for those non-PXE enabled devices/network. Option C (Auto Add from Policy) is incorrect because it specifies that administrative approval is required before unknown computers (computers that have not been prestaged in Active Directory Domain Services (AD DS)) are allowed to install an operating system. Option D (Use multicast image deployment) is the most appropriate choice to facilitate deployment an image to a large number of client computers without overburdening the network. WDS DEPLOYMENT IN DIFFERENT NETWORK SEGMENTS To allow computers in different network segments to install Windows by WDS, 1. PXE: Redirecting client broadcasts to the network boot server by updating route tables of the networking equipment (IP helper table update) 2. PXE: Redirecting client broadcasts to the network boot server by modifying DHCP options 60 (client identifier), 66 (boot server host name) and 67 (boot file name) - NOT recommended by Microsoft 3. Non-PXE: Booting client computers by Discovery Image <http://technet.microsoft.com/en-us/library/cc754117.aspx> [http://technet.microsoft.com/en-us/library/cc732351\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc732351(v=ws.10).aspx) [http://technet.microsoft.com/en-us/library/cc730907\(v=ws.10\).aspx#DiscoverImage](http://technet.microsoft.com/en-us/library/cc730907(v=ws.10).aspx#DiscoverImage)
