NEW QUESTION: 1The PRIMARY objective of implementing corporate governance by an organization's management is to:**A.** control business operations.**B.** implement best practices.**C.** provide strategic direction.**D.** align IT with business.**Answer: C****Explanation:** Explanation/Reference:Explanation:Corporate governance is a set of management practices to provide strategic direction, thereby ensuring that goals are achievable, risks are properly addressed and organizational resources are properly utilized.Hence, the primary objective of corporate governance is to provide strategic direction. Based on the strategic direction, business operations are directed and controlled.

NEW QUESTION: 2You plan to move a distributed on-premises app named App1 to an Azure subscription.After the planned move, App1 will be hosted on several Azure virtual machines. You need to ensure that App1 always runs on at least eight virtual machines during planned Azure maintenance.What should you create?**A.** one virtual machine scale set that has 10 virtual machines instances**B.** one Availability Set that has 10 update domains and one fault domain**C.** one Availability Set that has three fault domains and one update domain**D.** one virtual machine scale set that has 12 virtual machines instances**Answer: B****Explanation:**An update domain is a logical group of underlying hardware that can undergo maintenance or be rebooted at the same time. As you create VMs within an availability set, the Azure platform automatically distributes your VMs across these update domains. This approach ensures that at least one instance of your application always remains running as the Azure platform undergoes periodic maintenance.Reference:<http://www.thatlazyadmin.com/azure-fault-update-domains/>

NEW QUESTION: 3The 1800M GSM bandwidth allocated by the country to China Unicom is?**A.** 6MHz**B.** 10MHz**C.** 5MHz**D.** 8MHz**Answer: B**

NEW QUESTION: 4What is one of the advantages of using both symmetric and asymmetric cryptography in SSL/TLS?**A.** Symmetric algorithms such as AES provide a failsafe when asymmetric methods fail.**B.** Asymmetric cryptography is computationally expensive in comparison. However, it is well-suited to securely negotiate keys for use with symmetric cryptography.**C.** Symmetric encryption allows the server to security transmit the session keys out-of-band.**D.** Supporting both types of algorithms allows less-powerful devices such as mobile phones to use symmetric encryption instead.**Answer: D**
