But no matter what format, C-THR84-2305 test dumps will ensure you pass the exam successfully.

NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com.All client computers run Windows 8.You deploy a server named Server1 that runs Windows Server 2012.You install a new client-server Application named App1 on Server1 and on the client computers. The client computers must use TCP port 6444 to connect to App1 on Server1. Server1 publishes the information of App1 to an intranet server named Server2 by using TCP port 3080.You need to ensure that all of the client computers can connect to App1. The solution must ensure that the Application can connect to Server2.Which Windows Firewall rule should you create on Server1?**A.** An inbound rule to allow a connection to TCP port 6444**B.** An inbound rule to allow a connection to TCP port 3080**C.** An outbound rule to allow a connection to TCP port 6444**D.** An outbound rule to allow a connection to TCP port 3080**Answer: A****Explanation:** Server1 gets request from Client PC's it needs a inbound rule for 6444 By default, Windows Firewall with Advanced Security blocks all unsolicited inbound network traffic,and allows all outbound network traffic. For unsolicited inbound network traffic to reach your computer, you must create an allow rule to permit that type of network traffic. If a network program cannot get access,verify that in the Windows Firewall with Advanced Security snap-in there is an active allow rule for the current profile. To verify that there is an active allow rule, double-click Monitoring and then click Firewall.If there is no active allow rule for the program, go to the Inbound Rules node and create a new rule for that program. Create either a program rule, or a service rule, or search for a group that Applies to the feature and make sure all the rules in the group are enabled. To permit the traffic, you must create a rule for the program that needs to listen for that traffic. If you know the TCP or UDP port numbers required by the program, you can additionally restrict the rule to only those ports, reducing the vulnerability of opening up all ports for the program.
