For example: "name":"John" + Each key must be unique + Values must be of type string, number, object, array, boolean or null + Multiple key/value within an object are separated by commas, JSON can use arrays. Arrays are used to store multiple values in a single variable. For example:{"name":"John","age":30,"cars":["Ford", "BMW", "Fiat"]}In the above example, "cars" is an array which contains three values "Ford", "BMW" and "Fiat". Note: Although our correct answer above does not have curly braces to hold objects but it is still the best choice here.
