**NEW QUESTION: 1** Which of the following statements regarding the authentication domain of the Agile Controller are true? (Multiple Choice) **A.** A post-authentication domain defines controlled network resources that end users can access after passing identity authentication and security check, for example, the ERP system, financial system, and database. **B.** An isolation domain defines resources that end users passing identity authentication but failing the security check can access. These resources such as the patch server and antivirus server can help end users eliminate violations. **C.** A pre-authentication domain defines public network resources that users can access before passing identity authentication in the area, for example, the DNS server, external authentication source, Service Manager, and Service Controller. **D.** Authentication domains are classified into the pre-authentication domain, isolation domain, and post-authentication domain. **Answer: A,B,C,D**

**NEW QUESTION: 2** DRAG DROP You are a program manager who is using Microsoft PPM and Microsoft Project to manage an e-commerce portal development program. The program is separated into individual projects that represent each area of development, so that each group can manage its own tasks while still having progress visibility at the program level. You need to be able to manage the overall program as well as its associated individual projects within Project Center. This includes the project sites associated with both the program and the individual projects. Each individual project site should be a subsite of the overall program project site. You need to create the master program, the individual projects, and their associated project sites. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area, and arrange them in the correct order. **Answer:** Explanation:
