NEW QUESTION: 1Which two statements are true about the sequence of steps that are performed when creating a Database as a Service (DBaaS) instance in Oracle Public Cloud?**A.** A Secure Shell (SSH) key is provided by Oracle for accessing the DBaaS environment as the first step in creating a DBaaS instance.**B.** The public SSH key is provided when configuring the database in the DBaaS instance.**C.** The database that is configured may be an Oracle 11g database.**D.** Storage configuration must be selected for the DBaaS instance.**E.** The billing frequency depends on the Oracle database software edition that is selected for the DBaaS instance.**Answer: B,C**Explanation:ExplanationE: On wizard Software Release page page to select the Oracle Database software release that you want to run on your instance.Note: When you create a database instance, you use the Create Database Cloud Service wizard, which steps you through the process of making the choices that produce a service instance tailored to your needs. These choices include:

NEW QUESTION: 2You want to pass queue messages that are 1GB each. How should you achieve this?**A.** Use SQS's support for message partitioning and multi-part uploads on Amazon S3.**B.** Use the Amazon SQS Extended Client Library for Java and Amazon S3 as a storage mechanism for message bodies.**C.** Use AWS EFS as a shared pool storage medium. Store filesystem pointers to the files on disk in the SQS message bodies.**D.** Use Kinesis as a buffer stream for message bodies. Store the checkpoint id for the placement in the Kinesis Stream in SQS.**Answer: B**Explanation:ExplanationYou can manage Amazon SQS messages with Amazon S3. This is especially useful for storing and consuming messages with a message size of up to 2 GB. To manage Amazon SQS messages with Amazon S3, use the Amazon SQS Extended Client Library for Java. Specifically, you use this library to:

- * Specify whether messages are always stored in Amazon S3 or only when a message's size exceeds 256 KB.
- * Send a message that references a single message object stored in an Amazon S3 bucket.
- * Get the corresponding message object from an Amazon S3 bucket.
- * Delete the corresponding message object from an

Amazon S3 bucket. For more information on processing large messages for SQS, please visit the below URL:*

NEW QUESTION: 3 The essence of Lean is to concentrate effort on removing waste while improving process flow to achieve _____ at lower cost. **A.** Inventory **B.** Downtime **C.** Sales **D.** Speed and agility **Answer: D** Explanation: Explanation/Reference: Reference: https://books.google.com.pk/books?id=L7BDjeOiFV4C&pg=PA223&lpg=PA223&dq=six+sigma+The+essence+of+Lean+is+to+concentrate+effort+on+removing+waste+while+improving+process+flow+to+achieve+at+lower+cost&source=bl&ots=DMtMXpUFgH&sig=TaxN79hCd6zjPRN1tR7_pMeE-Ts&hl=en&sa=X&ved=2ahUKEwjfoKaZ7oPfAhVNOBoKHRw2BxAQ6AEwBHoECAYQAQ#v=onepage&q=six%20sigma%20The%20essence%20of%20Lean%20is%20to%20concentrate%20effort%20on%20removing%20waste%20while%20improving%20process%20flow%20to%20achieve%20at%20lower%20cost&f=false

NEW QUESTION: 4 Which type of risk assessment is the formula $ALE = ARO \times SLE$ used for? **A.** Quantitative Analysis **B.** Expected Loss Analysis **C.** Objective Analysis **D.** Qualitative Analysis **Answer: A** Explanation: The formula $ALE = ARO \times SLE$ involves numerical values or quantities of a given resource or occurrence so it is thus a quantitative analysis. ALE = Annual Loss expectancy or how much it might cost per year if you were to lose the asset ARO = Annual Rate of Occurrence or how often the loss might occur. SLE = Single Loss Expectancy or how much each incident of loss would cost the organization. Using these values you can determine how much you should spend to secure the resources against loss. It is useful to use these costs when we compare them to the value of the asset for which we are responsible. It wouldn't be sensible to spend \$10,000 USD a year for an asset you could replace for \$2,000 USD. The following answers are incorrect: -Qualitative Analysis: This is part of the risk analysis process where interviews are conducted with employees to determine risk and where focus should be made for protecting assets. Many analysts combine Quantitative and Qualitative risk assessments to form an effective picture of where dollars should be spent to secure critical resources for the organization. It is not a correct answer because it does not use a mathematical formula to determine a hard value. -Objective Analysis: This is not a commonly used term to describe an approach to risk analysis but an objective approach could be likened more to a quantitative analysis where specific values are determined in the risk analysis process. -Expected Loss Analysis: This is also not a common term in risk analysis but it could describe the concept of analysis an expected loss due to a threat for which you must plan.
