In addition, you will not feel boring to learn the knowledge.

**NEW QUESTION: 1**A company has developed a Node.js web application which provides REST services to store and retrieve time series data. The web application is built by the Development team on company laptops, tested locally, and manually deployed to a single on-premises server, which accesses a local MySQL database. The company is starting a trial in two weeks, during which the application will undergo frequent updates based on customer feedback. The following requirements must be met:- The team must be able to reliably build, test, and deploy new updates on a daily basis, without downtime or degraded performance.- The application must be able to scale to meet an unpredictable number of concurrent users during the trial. Which action will allow the team to quickly meet these objectives?**A.** Configure AWS Elastic Beanstalk to automatically build the application using AWS CodeBuild and to deploy it to a test environment that is configured to support auto scaling. Create a second Elastic Beanstalk environment for production. Use Amazon RDS to store data. When new versions of the applications have passed all tests, use Elastic Beanstalk `swap cname` to promote the test environment to production.**B.** Develop an AWS CloudFormation template to create an Application Load Balancer and two Amazon EC2 instances with Amazon EBS (SSD) volumes in an Auto Scaling group with rolling updates enabled. Use AWS CodeBuild to build and test the Node.js application and store it in an Amazon S3 bucket. Use user-data scripts to install the application and the MySQL database on each EC2 instance. Update the stack to deploy new application versions.**C.** Modify the application to use Amazon DynamoDB instead of a local MySQL database. Use AWS OpsWorks to create a stack for the application with a DynamoDB layer, an Application Load Balancer layer, and an Amazon EC2 instance layer. Use a Chef recipe to build the application and a Chef recipe to deploy the application to the EC2 instance layer. Use custom health checks to run unit tests on each instance with rollback on failure.**D.** Create two Amazon Lightsail virtual private servers for Node.js; one for test and one for production. Build the Node.js application using existing process and upload it to the new Lightsail test server using the AWS CLI. Test the application, and if it passes all tests, upload it to the production server. During the trial, monitor the production server usage, and if needed, increase performance by upgrading the instance type.**Answer: C**

**NEW QUESTION: 2**Your network contains three servers. The servers are configured as shown in the following table. Your company plans to standardize all of the servers on Windows Server

2012. You need to recommend an upgrade path for each server. The solution must meet the following requirements: \* Upgrade the existing operating system whenever possible. \* Minimize hardware purchases. Which upgrade path should you recommend for each server? To answer, drag the appropriate upgrade path to each server in the answer area. Each upgrade path may be used once, more than once, or not at all. Select and Place: **Answer:** Explanation: Explanation/Reference: Server 2012 does not support x86 processors; only 64-bit. => server1 Clean install on new hardware Server2 has an x64 processor but the current OS is 32-bit and upgrading from a 32-bit version to a 64-bit version is impossible => Server2 clean install on existing hardware Server3 has an x64 processor and the current OS is 64-bit => Server3 upgrade to 2012 core installation on existing hardware (if required, we can then convert to GUI) <http://technet.microsoft.com/en-us/library/jj134246.aspx> Installing Windows Server 2012 System requirements The following are estimated system requirements for the Windows Server 2012. If your computer has less than the "minimum" requirements, you will not be able to install this product correctly. Actual requirements will vary based on your system configuration and the applications and features you install. Processor Processor performance depends not only on the clock frequency of the processor, but also on the number of processor cores and the size of the processor cache. The following are the processor requirements for this product: Minimum: 1.4 GHz 64-bit processor RAM The following are the estimated RAM requirements for this product: Minimum: 512 MB Disk space requirements The following are the estimated minimum disk space requirements for the system partition. Minimum: 32 GB

=====  
<http://blogs.technet.com/b/askcore/archive/2012/10/23/upgrading-to-windows-server-2012-part-1.aspx> Upgrading to Windows Server 2012 - Part 1 Other considerations: If you have an existing Server Core for Windows Server 2008 with Service Pack 2 (SP2) or Windows Server 2008 R2 installation, you have to upgrade this to Windows Server 2012 Server Core. Once upgraded, you then have an option to install the GUI if required. Similarly, you must first upgrade full server installation of Windows Server 2008 and Windows Server 2008 R2 to Windows Server 2012 (Server with a GUI). After the upgrade is done, you can then remove the graphical shell as needed. The following KB article talks about a specific issue on the upgraded Windows Server 2012: 2775484 Unable to convert to Server with a GUI from Server Core on an upgraded Windows Server 2012-based machine ===== NB : <http://support.microsoft.com/kb/2775484> Unable to convert to Server with a GUI from Server Core on an upgraded Windows Server 2012-based machine

**NEW QUESTION: 3** CORRECT TEXT With the web site, [www.tldp.org](http://www.tldp.org), what does "tldp" stand for? **Answer:** Explanation: The Linux Documentation Project
