A. HPE infoSight **B.** HPE OneView **C.** HPE Power Advisor **D.** HPE Assessment Foundry
Answer: B

NEW QUESTION: 3 Which protocol is supported when OSPFv2 is used as the routing protocol?
A. IPv6 **B.** UDPC. **C.** TCP **D.** IPv4
Answer: D

NEW QUESTION: 4An administrator wants to establish a WiFi network using a high gain directional antenna with a narrow radiation pattern to connect two buildings separated by a very long distance. Which of the following antennas would be BEST for this situation?
A. Dipole
B. Sector
C. Omni
D. Yagi
Answer: D
Explanation: A Yagi-Uda antenna, commonly known simply as a Yagi antenna, is a directional antenna consisting of multiple parallel dipole elements in a line, usually made of metal rods. It consists of a single driven element connected to the transmitter or receiver with a transmission line, and additional parasitic elements: a so-called reflector and one or more directors. The reflector element is slightly longer than the driven dipole, whereas the directors are a little shorter. This design achieves a very substantial increase in the antenna's directionality and gain compared to a simple dipole.
