NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.You are planning a big data infrastructure by using an Apache Spark cluster in Azure HDInsight. The cluster has 24 processor cores and 512 GB of memory.The architecture of the infrastructure is shown in the exhibit. (Click the Exhibit button.)The architecture will be used by the following users:Support analysts who run applications that will use REST to submit Spark jobs.Business analysts who use JDBC and ODBC client applications from a real-time view. The business analysts run monitoring queries to access aggregate results for 15 minutes. The results will be referenced by subsequent queries.Data analysts who publish notebooks drawn from batch layer, serving layer, and speed layer queries. All of the notebooks must support native interpreters for data sources that are batch processed. The serving layer queries are written in Apache Hive and must support multiple sessions. Unique GUIDs are used across the data sources, which allow the data analysts to use Spark SQL.The data sources in the batch layer share a common storage container. The following data sources are used:Hive for sales dataApache HBase for operations dataHBase for logistics data by using a single region serverYou need to ensure that the support analysts can develop embedded analytics applications by using the least amount of development effort.Which technology should you implement?**A.** Zeppelin**B.** Livy**C.** Jupyter**D.** Apache Ambari**Answer: B**Explanation:References: <https://docs.microsoft.com/en-us/azure/hdinsight/hdinsight-apache-spark-livy-rest-interface>
