Valid RhMSUS Practice Questions, However, due to the severe employment situation, more and more people have been crazy for passing the RhMSUS exam by taking examinations, and our RhMSUS exam questions can help you pass the RhMSUS exam in the shortest time with a high score.

NEW QUESTION: 1You are a Dynamics 365 for Customer Service system administrator. You create a parent entity and a child entity. The parent entity has a 1:N relationship with the child entity. You need to ensure that when the owner changes on the parent record that all child records are assigned to the new owner. You need to configure the relationship behavior type. What should you use? **A.** Referential, Restrict Delete **B.** Restrict **C.** Parental **D.** Referential **Answer: C**
Explanation: Explanation/Reference: References:
<https://docs.microsoft.com/en-us/dynamics365/customer-engagement/customize/create-and-edit-1n-relationships#relationship-behavior>

NEW QUESTION: 2An IS auditor issues an audit report pointing out the lack of firewall protection features at the perimeter network gateway and recommends a vendor product to address this vulnerability. The IS auditor has failed to exercise: **A.** professional competence. **B.** organizational independence. **C.** professional independence **D.** technical competence. **Answer: C**
Explanation: When an IS auditor recommends a specific vendor, they compromise professional independence. Organizational independence has no relevance to the content of an audit report and should be considered at the time of accepting the engagement. Technical and professional competence is not relevant to the requirement of independence.

NEW QUESTION: 3

開発中のアプリケーションは、何百ものビデオファイルを格納するために必要です。データは、各々のビデオファイルのための独特の鍵を有する記憶装置の前にアプリケーションの範囲内で暗号化されなければならない。
どのように、開発者はアプリケーションをコード化しなければなりませんか? **A.** WS . KSキーでサーバー側の暗号化を使用してデータをS3バケットにアップロードします。 **B.** KMS GenerateDataKey APIを使用してデータキーを取得します。データキーでデータを暗号化します。暗号化データキーとデータを格納します。 **C.** アプリケーションの暗号化キーを生成する暗号ライブラリを使用します。暗号化キーを使用してデータを暗号化します。暗号化データを保存します。 **D.** 暗号化APIを使用してデータを暗号化します。暗号化データキーとデータを格納します。 **Answer: B**
Explanation: Explanation Refer AWS documentation - KMS GenerateDataKey Returns a data encryption key that you can use in your application to encrypt data locally. You must specify the customer master key (CMK) under which to generate the data key. You must also specify the length of the data key using either the KeySpec or NumberOfBytes field. You must specify one field or the other, but not both. For common key lengths (128-bit and 256-bit symmetric keys), we recommend that you use KeySpec. To perform this operation on a CMK in a different AWS account, specify the key ARN or alias ARN in the value of the KeyId parameter. This operation returns a plaintext copy of the data key in the Plaintext field of the response, and an encrypted copy of the data key in the CiphertextBlob field. The data key is encrypted under the CMK

specified in the KeyId field of the request.
