Explanation: Configuring EIGRP for IPv6 has some restrictions; they are listed below: - The interfaces can be directly configured with EIGRP for IPv6, without the use of a global IPv6 address. There is no network statement in EIGRP for IPv6. - The router ID needs to be configured for an EIGRPv6 protocol instance before it can run. - EIGRP for IPv6 has a shutdown feature. Ensure that the routing process is in "no shut" mode to start running the protocol. Reference:
