NEW QUESTION: 2Which of the following processor states does not save power?**A.** C3**B.** C2**C.** C1**D.** C0**Answer: D****Explanation:**The C0 processor state does not save power. It is an operational state. Answer option B is incorrect. The C1 state is a powered down state, but the processor takes action immediately on request. The C1 state uses less power than C0 state. Answer option A is incorrect. The C2 state is also known as Stop-Clock. It uses less power than C1 state. In this state, the processor takes a little longer time than C1 state to come in action on the request of applications. Answer option C is incorrect. The C3 state is also known as the sleep mode. In this state, the processor cache is flushed. In this state, the processor takes a few seconds to be available for action.

Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You are a database administrator for an e-commerce company that runs an online store. The company has the databases described in the following table. Product prices are updated and are stored in a table named Products on DB1. The Products table is deleted and refreshed each night from MDS by using a Microsoft SQL Server Integration Services (SSIS) package. None of the data sources are sorted. You need to update the SSIS package to add current prices to the Products table. What should you use?**A.** MERGE statement**B.** Merge Join transformation**C.** Merge transformation**D.** Foreach Loop container**E.** Sequential container**F.** Lookup transformation**G.** Balanced Data Distributor transformation**H.** Union All transformation**Answer: A****Explanation:**Explanation/Reference: Explanation: In the current release of SQL Server Integration Services, the SQL statement in an Execute SQL task can contain a MERGE statement. This MERGE statement enables you to accomplish multiple INSERT, UPDATE, and DELETE operations in a single statement. References:
