NEW QUESTION: 1 Which of the following documents contain a list of all problems, unfavorable events, or situations that occurred so far in the program?
A. Program issue register
B. Program scope statement
C. Program risk register
D. Program charter
Answer: A

NEW QUESTION: 2 Your network contains an Active Directory domain named contoso.com. The domain contains the organization units (OUs) configured as shown in the following table. Users and computers at the company change often. You create a Group Policy object (GPO) named GPO6. GPO6 contains user settings. You need to ensure that GPO6 applies to users when they log on to the kiosk computers only. The solution must minimize administrative effort. What should you do?
A. Link GPO6 to OU1 and configure WMI filtering on GPO3.
B. Link GPO6 to OU1 and configure loopback processing in GPO6.
C. Link GPO6 to OU1 and configure loopback processing in GPO5.
D. Link GPO6 to OU4 and configure loopback processing in GPO6.
Answer: D
Explanation: Group Policy applies to the user or computer in a manner that depends on where both the user and the computer objects are located in Active Directory. However, in some cases, users may need policy applied to them based on the location of the computer object alone. You can use the Group Policy loopback feature to apply Group Policy Objects (GPOs) that depend only on which computer the user logs on to.

NEW QUESTION: 3 Ann, a security analyst, is preparing for an upcoming security audit. Which of the following would Ann use to ensure that she identifies unapplied security controls and patches without attacking or compromising the system?
A. SQL injection
B. Vulnerability scanning
C. Antivirus update
D. Penetration testing
Answer: B
Explanation:

Explanation/Reference: Explanation: A vulnerability scan is the process of scanning the network and/or I.T. infrastructure for threats and vulnerabilities. The threats and vulnerabilities are then evaluated in a risk assessment and the necessary actions taken to resolve and vulnerabilities. A vulnerability scan scans for known weaknesses such as missing patches or security updates. A vulnerability scan is the automated process of proactively identifying security vulnerabilities of computing systems in a network in order to determine if and where a system can be exploited and/or threatened. While public servers are important for communication and data transfer over the Internet, they open the door to potential security breaches by threat agents, such as malicious hackers. Vulnerability scanning employs software that seeks out security flaws based

on a database of known flaws, testing systems for the occurrence of these flaws and generating a report of the findings that an individual or an enterprise can use to tighten the network's security.

NEW QUESTION: 418.in RedHat Linux shell which command can be used to check what file system is mounted and from what disk device it was done?**A. FdiskB. mountC. DuD. Ppart**

Answer: B
