NEW QUESTION: 2Robert Williams is a junior analyst at Anderson Brothers, a large Wall Street brokerage firm. He reports to Will McDonald, the chief economist for Anderson Brothers. McDonald provides economic research, forecasts, and interpretation of economic data to all of Anderson's investment departments, as well as the firm's clients. McDonald has asked Williams to analyze economic trends in the country of Bundovia. The currency of Bundovia is the Bunco (BU). Williams first analyzes the effect of rising nominal Bundovian interest rates relative to U.S interest rates on the supply and demand for BU. He determines that the increase in Bundovian nominal interest rates would increase the demand for BU and, because the BU supply curve is upward sloping, the BU will appreciate and the equilibrium quantity of BU will increase proportionately. Bundovia has announced plans to impose either a tariff or a quota on semiconductor imports from the United States. McDonald also asks Williams to analyze the potential effect on Bundovian Semiconductors, the dominant semiconductor manufacturer located in Bundovia. Currently, Bundovian Semiconductors is not competitive in the global semiconductor market because its higher production costs make it unable to generate profits at the current world market price. Williams concludes that the imposition of either a tariff or quotas would benefit Bundovian Semiconductors. The company would become competitive with foreign producers in its domestic semiconductor market because imports would be reduced and domestic production would rise. Exhibit 1 shows the trend in the average BU/USD exchange rate over the past three years. Williams asks the bank for a GBP/\$ cross rate. From the same bank, Williams receives the following forward rate quotes in the USD/GBP market: * 30-day forward rate: USD/GBP = USD/GBP = 2.0045 - 55* 60-day forward rate: USD/GBP = USD/GBP = 2.0075 - 85 Williams has uncovered a potential arbitrage opportunity in the foreign exchange markets. The current spot rate is \$2.00 per BU. The Bundovian risk-free interest rate is 3%, and the one-year forward rate is \$2.10 per BU. The U.S. risk-free rate is 5%. Is Williams correct in his conclusions that Bundovian Semiconductors would benefit from the imposition of a tariff or quota? **A. He is only correct about the quota. B. He is only correct about the tariff. C. He is correct on both. Answer: C** Explanation: Explanation/Reference: Explanation: Williams is correct in his assessment of the effects of a tariff and a quota. Both would benefit Bundovian Semiconductors. The company would be more competitive in the domestic market because imports would fall and domestic production would rise. (Study Session 4, LOS I6.b)
