**NEW QUESTION: 1**Your network contains three servers named Server1, Server2, and Server3. Server1 is located on a perimeter network. Server2 and Server3 are accessible from the internal network only. Users connect to Server2 and Server3 to run RemoteApp programs. You need to ensure that remote users can run the RemoteApp programs on Server2 and Server3. The solution must minimize the number of ports that must be opened on the internal firewall. Which role service should you install on Server3?  
**A.** Remote Desktop Web Access (RD Web Access)  
**B.** Remote Desktop Session Host (RD Session Host)  
**C.** Remote Desktop Connection Broker (RD Connection Broker)  
**D.** Remote Desktop Gateway (RD Gateway)  
**Answer: D**

**NEW QUESTION: 2**A Cloud Development team needs to use service accounts extensively in their local development. You need to provide the team with the keys for these service accounts. You want to follow Google-recommended practices. What should you do?  
**A.** Implement a daily key rotation process that generates a new key and commits it to the source code repository every day.  
**B.** Implement a daily key rotation process, and provide developers with a Cloud Storage bucket from which they can download the new key every day.  
**C.** Create a Google Group with all developers. Assign the group the IAM role of Service Account Admin, and have developers generate and download their own keys.  
**D.** Create a Google Group with all developers. Assign the group the IAM role of Service Account User, and have developers generate and download their own keys.  
**Answer: B**  
**Explanation:**A is not correct because source code repository isn't the place to store keys that expire/change. B is correct because it allows for centralized admin managed key rotation process and doesn't delegate key creation to developers which is easier and secure way to manage keys. C is not correct because the IAM role

specified doesn't allow for creation of keys. D is not correct because it veers away from best practices as the keys now reside in decentralized place and can be subjected to a leak.
