NEW QUESTION: 1

XYZ社は、よりクラウドベースのビジネスツールを使用していることに気付き、パスワード管理は面倒になっています。セキュリティは会社にとって重要です。その結果、パスワードの複製と共有アカウントは受け入れられません。次の実装のうちどれが集中認証による分散型ログインに対応しており、SaaSベンダー間で幅広い互換性がありますか？**A.**

既存の社内RADIUSサーバーへの外部接続を許可します。**B.**

SAMLをサポートするクラウドベースの認証サービスを確立します。**C.**

フェデレーション用に読み取り専用のActive

Directoryサーバーを企業のDMZにインストールします。**D.**

読み取り専用の認証を使用して新しいDiameter認証サーバーを実装します。**Answer: B**

Explanation: There is widespread adoption of SAML standards by SaaS vendors for single sign-on identity management, in response to customer demands for fast, simple and secure employee, customer and partner access to applications in their environments. By eliminating all passwords and instead using digital signatures for authentication and authorization of data access, SAML has become the Gold Standard for single sign-on into cloud applications.

SAML-enabled SaaS applications are easier and quicker to user provision in complex enterprise environments, are more secure and help simplify identity management across large and diverse user communities. Security Assertion Markup Language (SAML) is an XML-based, open-standard data format for exchanging authentication and authorization data between parties, in particular, between an identity provider and a service provider. The SAML specification defines three roles: the principal (typically a user), the Identity provider (IdP), and the service provider (SP). In the use case addressed by SAML, the principal requests a service from the service provider. The service provider requests and obtains an identity assertion from the identity provider. On the basis of this assertion, the service provider can make an access control decision - in other words it can decide whether to perform some service for the connected principal. Incorrect Answers: B: Diameter authentication server with read-only attestation is not a solution that has wide compatibility among SaaS vendors. C: The question states that password replication is not acceptable. A read-only Active Directory server in the corporate DMZ would involve password replication. D: Allowing external connections to the existing corporate RADIUS server is not a secure solution. It is also not a solution that has wide compatibility among SaaS vendors. References:
