NEW QUESTION: 1 Within a WebSphere Application Server Network Deployment cell, a system administrator needs to write a script to determine if a particular server is stopped. It is important that the wsadmin script explicitly return a status of stopped as opposed to just failing. What wsadmin object should the administrator use to write this script? **A.** AdminConfig **B.** AdminTask **C.** AdminApp **D.** AdminControl **Answer: D** **Explanation:** Reference: http://www01.ibm.com/support/knowledgecenter/SSAW57_8.0.0/com.ibm.websphere.nd.doc/info/ae/a e/welc6tops scripting.html

NEW QUESTION: 2 Your network contains an Active Directory domain. The domain contains a Windows Server Update Services (WSUS) server named Server1. A Group Policy object (GPO) named GPO1 configures all computers in the domain to use Server1 for Windows Update. You add a new Windows 7 computer named Computer1 to the domain. From the Update Services console, you discover that Computer1 is not listed as a member of any computer groups. You verify that GPO1 is applied to Computer1. You need to ensure that Computer1 is available in the Update Services console. What should you do? **A.** On Server1, run wsusutil.exe reset. **B.** On Computer1, run wuaclt.exe /detectnow. **C.** On Server1, run wsusutil.exe listinactiveapprovals. **D.** On Computer1, run wuaclt.exe /reportnow. **Answer: B** **Explanation:** Automatic Updates Behavior Using Command-line Options There are two documented command-line options used for manipulating Automatic Updates behavior. These options are meant to be run from a command prompt. They are helpful for testing and troubleshooting client computers. For comprehensive troubleshooting information for problems with both the WSUS server and client computers, see "Microsoft Windows Server Update Services Operations Guide." **Detectnow Option** Because waiting for detection to start can be a time-consuming process, an option has been added to allow you to initiate detection right away. On one of the computers with the new Automatic Update client installed, run the following command at the command prompt: wuaclt.exe /detectnow **Resetauthorization Option** WSUS uses a cookie on client computers to store various types of information, including computer group membership when client-side targeting is used. By default this cookie expires an hour after WSUS creates it. If you are using client-side targeting and change group membership, use this option in combination with detectnow to expire the cookie, initiate detection, and have WSUS update computer group membership. Note that when combining parameters, you can use them only in the order specified as follows: wuaclt.exe /resetauthorization /detectnow [http://technet.microsoft.com/en-us/library/cc708617\(v=WS.10\).aspx](http://technet.microsoft.com/en-us/library/cc708617(v=WS.10).aspx)

NEW QUESTION: 3 Optical fiber all-dielectric cables have an additional advantage over ones

containing a steel strength member. That advantage is:**A.** More resistant to rodent damage**B.** Cables are made of a tougher outer PVC jacket**C.** More difficult to damage**D.** More resistant to lightning and electrical conduction**Answer: D**
