NEW QUESTION: 1A corporate network includes a single Active Directory Domain Services (AD DS) domain and two ADDS sites. The AD DS sites are named Toronto and Montreal. Each site has multiple domain controllers. You need to determine which domain controller holds the Inter-Site Topology Generator role for the Toronto site. What should you do?
A. Use the Active Directory Sites and Services console to view the properties of each domain controller in the Toronto site.
B. Use the Active Directory Sites and Services console to view the NTDS Site Settings for the Toronto site.
C. Use the Ntdsutil tool with the roles parameter.
D. Use the Ntdsutil tool with the LDAP policies parameter.
Answer: B
Explanation: Reference: <http://technet.microsoft.com/en-us/library/cc794776.aspx>
Determine the ISTG Role Owner for a Site
The Intersite Topology Generator (ISTG) is the domain controller in each site that is responsible for generating the intersite topology. If you want to regenerate the intersite topology, you must determine the identity of the ISTG role owner in a site. You can use this procedure to view the NTDS Site Settings object properties and determine the ISTG role owner for the site.
To determine the ISTG role owner for a site
1. Open Active Directory Sites and Services.
2. In the console tree, click the site object whose ISTG role owner you want to determine.
3. In the details pane, right-click the NTDS Site Settings object, and then click Properties. The current role owner appears in the Server box under Inter-Site Topology Generator.
