NEW QUESTION: 3You have a computer named Computer1 that runs Windows 7.Computer1 has a shared printer.You need to configure Computer1 so that only Administrators are authorized to shut down the computer.What should you do?**A.** From the local computer policy, modify the Security Options.**B.** From User Accounts, modify the User Account Control (UAC) settings.**C.** From User Accounts, modify the user profiles settings.**D.** From the local computer policy, modify the User Rights Assignment.**Answer: D**Explanation:Shut down the system Computer ConfigurationWindows SettingsSecurity SettingsLocal PoliciesUser Rights AssignmentDetermines which users logged on locally to the computer can shut down the operating system using the Shut Down command.This user right is defined in the Default Domain Controller Group Policy object (GPO) and in the local security policy of workstations and servers.

NEW QUESTION: 4You plan to use a Hyper-V host server to host virtual desktops for external customers.You have the following requirements:Individual virtual machines (VMs) must be isolated from one another.VMs must have access to the Internet.IP addresses should be used in the most efficient manner possible.The configuration must minimize administrative effort and management complexity.You need to configure the virtual environment.What should you do?**A.** Configure a port virtual local area network (PVLAN). Connect all new VMs to the PVLAN.**B.** Configure a virtual network with no isolation. Deploy VMs to the same VM network. Configure Windows firewall on each VM to prevent the VM from communicating with other VMs on the same VM network.**C.** Configure virtual networking with network isolation. Create a unique VM network for each VM.**D.** Deploy VMs to the same VM network. Enable DHCP Guard and Router Guard network extensions.**Answer: A**Explanation:Explanation/Reference:Explanation: PVLAN can be used to create an environment where VMs may only interact with the Internet and not have visibility into other VMs' network traffic. To accomplish this put all VMs (actually their Hyper-V switch ports) into the same PVLAN in isolated mode. Therefore, using only two VLAN IDs, primary and secondary, all VMs are isolated from each other.Ref: http://technet.microsoft.com/en-us/library/jj679878.aspx#bkmk_pvlan
