**NEW QUESTION: 1** Which two statements about IS-IS are true? (Choose two.)  
**A.** Both IS-IS routers need to have the same capabilities in the hello packet in order to form neighbors.  
**B.** The hello interval can be changed on a per-interface basis with the command `isis hello-multiplier`.  
**C.** The default hello interval is 10 seconds and the default hold timer is 30 seconds.  
**D.** Both routers need to have the same hello intervals and hold timers in order to form IS-IS neighbors.  
**Answer: B, C**  
**Explanation:** `isis hello-interval` To specify the length of time between hello packets that the Cisco IOS software sends, use the `isis hello-interval` command in interface configuration mode. By default, a value three times the hello interval seconds is advertised as the hold time in the hello packets sent. (Change the multiplier of 3 by specifying the `isis hello-multiplier` command.) With smaller hello intervals, topological changes are detected faster, but there is more routing traffic. The default is 10 seconds.
