Fast delivery in 5 to 10 minutes after payment, Our BL0-220 exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field.

### **NEW QUESTION: 1**

あなたの会社は、いくつかのLinuxおよびWindows仮想マシン（VM）をAzureにデプロイしています。

VMは、AzureVM拡張機能を使用してインストールされたMicrosoftDependencyAgentとLogAnalyticsAgentを使用して展開されます。オンプレミス接続は、AzureExpressRouteを使用して有効になっています。VMを監視するためのソリューションを設計する必要があります。

どのAzure監視サービスを使用する必要がありますか？回答するには、回答領域で適切なAzure監視サービスを選択します。注：正しい選択はそれぞれ1ポイントの価値があります。**Answer:**

Explanation:Explanation:Box 1: Azure Traffic AnalyticsTraffic Analytics is a cloud-based solution that provides visibility into user and application activity in cloud networks. Traffic analytics analyzes Network Watcher network security group (NSG) flow logs to provide insights into traffic flow in your Azure cloud. With traffic analytics, you can:\* Identify security threats to, and secure your network, with information such as open-ports, applications attempting internet access, and virtual machines (VM) connecting to rogue networks.\* Visualize network activity across your Azure subscriptions and identify hot spots.\* Understand traffic flow patterns across Azure regions and the internet to optimize your network deployment for performance and capacity.\* Pinpoint network misconfigurations leading to failed connections in your network.

Box 2: Azure Service MapService Map automatically discovers application components on Windows and Linux systems and maps the communication between services. With Service Map, you can view your servers in the way that you think of them: as interconnected systems that deliver critical services. Service Map shows connections between servers, processes, inbound and outbound connection latency, and ports across any TCP-connected architecture, with no configuration required other than the installation of an agent.References:
