24 hours for online staff service, ECCouncil 312-50v12 - No one is willing to buy a defective product.

**NEW QUESTION: 1**Which of the following BEST explains the use of an HSM within the company servers?**A.** Hardware encryption is faster than software encryption.**B.** Thumb drives present a significant threat which is mitigated by HSM.**C.** Data loss by removable media can be prevented with DLP.**D.** Software encryption can perform multiple functions required by HSM.**Answer: A**  
Explanation:Hardware Security Module (HSM) is a cryptoprocessor that can be used to enhance security. It provides a fast solution for the for large asymmetrical encryption calculations and is much faster than software-based cryptographic solutions.

**NEW QUESTION: 2**質問のドラッグアンドドロップ  
以下の最大速度を対応するワイヤレス規格にドラッグアンドドロップします。  
トークンは複数回使用できます。**Answer:** Explanation:

**NEW QUESTION: 3**In a PfR environment, which two statements best describe the difference between active mode monitoring and fast mode monitoring? (Choose two.)**A.** Active mode monitoring can monitor and measure actual traffic via NetFlow data collection.**B.** Fast mode monitoring can measure bursty traffic better than active mode.**C.** Fast mode monitoring uses IP SLA probes via all valid exits continuously to quickly determine an alternate exit link.**D.** Active mode monitoring uses IP SLA probes for the purpose of obtaining performance characteristics of the current WAN exit link.**Answer: C,D**  
Explanation:Active Monitoring PfR uses Cisco IOS IP Service Level Agreements (SLAs) to enable active monitoring. IP SLAs support is enabled by default. IP SLAs support allows PfR to be configured to send active probes to target IP addresses to measure the jitter and delay, determining if a prefix is out-of-policy and if the best exit is selected. The border router collects these performance statistics from the active probe and transmits this information to the master controller.Fast Failover Monitoring Fast failover monitoring enables passive and active monitoring and sets the active probes to continuously monitor all the exits (probe-all). Fast failover monitoring can be used with all types of active probes: Internet Control Message Protocol (ICMP) echo, jitter, TCP connection, and UDP echo.
