NEW QUESTION: 1Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Azure subscription named Project1. Only a group named Project1admins is assigned roles in the Project1 subscription. The Project1 subscription contains all the resources for an application named Application1. Your company is developing a new application named Application2. The members of the Application2development team belong to an Azure Active Directory (Azure AD) group named App2Dev. You identify the following requirements for Application2: * The members of App2Dev must be prevented from changing the role assignments in Azure. * The members of App2Dev must be able to create new Azure resources required by Application2. * All the required role assignments for Application2 will be performed by the members of Project1admins. You need to recommend a solution for the role assignments of Application2. Solution: Create a new Azure subscription named Project2. Assign Project1admins the User Access Administrator role for the Project2 subscription. Assign App2Dev the Owner role for the Project2 subscription. Does this meet the goal? **A. No** **B. Yes** **Answer: A**

NEW QUESTION: 2When creating an XaaS blueprint that includes the workflow to create a custom vSphere virtual machine, which field does an administrator add to present descriptive text to the consumer of the resource? **A. The Integer field element from the New fields list** **B. The Label header element from the Form list** **C. The Text field element from the New fields list** **D. The Text element from the Form list** **Answer: C**
