Owing our Advanced-Administrator test dumps insides, you can save a lot of extra money and time, and then you have more time to do some interesting things you like.

NEW QUESTION: 1 Hinweis: Diese Frage ist Teil einer Reihe von Fragen, bei denen die gleichen oder ähnliche Antwortmöglichkeiten verwendet werden. Eine Antwortauswahl kann für mehr als eine Frage in der Reihe richtig sein. Jede Frage ist unabhängig von den anderen Fragen in dieser Reihe. In einer Frage angegebene Informationen und Details gelten nur für diese Frage. Sie haben eine Microsoft SQL Server-Datenbank mit dem Namen DB1, die die folgenden Tabellen enthält: Es gibt keine Fremdschlüsselbeziehungen zwischen TBL1 und TBL2. Sie müssen eine Abfrage erstellen, die Daten aus beiden Tabellen enthält und die Zeit minimiert, die die Abfrage benötigt, um Daten zurückzugeben. Was tun? **A.** Erstellen Sie Clustered-Indizes für TBL1 und TBL2. **B.** Löschen Sie vorhandene Indizes in TBL1 und erstellen Sie dann einen Clustered-Columnstore-Index. Erstellen Sie einen nicht gruppierten Columnstore-Index für TBL1. Erstellen Sie einen nicht gruppierten Index für TBL2. **C.** Löschen Sie vorhandene Indizes in TBL1 und erstellen Sie dann einen gruppierten Columnstore-Index. Erstellen Sie einen nicht gruppierten Columnstore-Index für TBL1. Nehmen Sie keine Änderungen an TBL2 vor. **D.** Erstellen Sie eine indizierte Ansicht, die Spalten aus TBL1 und TBL2 kombiniert. **E.** Erstellen Sie einen nicht gruppierten Index nur für TBL2. **F.** Erstellen Sie einen Clustered-Index für TBL1. Erstellen Sie einen Nonclustered-Index für TBL2 und fügen Sie die am häufigsten abgefragten Spalten als eingeschlossene Spalten hinzu. **G.** Erstellen Sie UNIQUE-Einschränkungen für TBL1 und TBL2. Erstellen Sie eine partitionierte Ansicht, die Spalten aus TBL1 und TBL2 kombiniert. **H.** Erstellen Sie CHECK-Einschränkungen für TBL1 und TBL2. Erstellen Sie eine partitionierte Ansicht, die Spalten aus TBL1 und TBL2 kombiniert. **Answer: H** Explanation: Explanation A partitioned view is a view defined by a UNION ALL of member tables structured in the same way, but stored separately as multiple tables in either the same instance of SQL Server or in a group of autonomous instances of SQL Server servers, called federated database servers. Conditions for Creating Partitioned Views Include: The select list* All columns in the member tables should be selected in the column list of the view definition.* The columns in the same ordinal position of each select list should be of the same type, including collations. It is not sufficient for the columns to be implicitly convertible types, as is generally the case for UNION. Also, at least one column (for example <col>) must appear in all the select lists in the same ordinal position. This <col> should be defined in a way that the member tables T1, ..., Tn have CHECK constraints C1, ..., Cn defined on <col>, respectively. NEW QUESTION: 2 Your customer has asked that all incidents be "scanned" for words that may revolve around product defects and injures so that they can alert their risk management team

of any possible product issues or liability. The customer accepts that 100% accuracy is not available, and accepts that they will be false positives and a margin for error. They have provided you the following words to be "scanned": -Mouth -Jaw -Cheek -Jowl -Chin -Oral -Palate The customer requires the following: -Match whole words only -All valid words must be preceded with a space. -All valid words must be spelled correctly. -All words must be directly followed by a meta character in this list: -, {comma}, {period}, ' {single quote}, " {double quote}, {semi colon}, {colon}, {space}, ! {exclamation point}, ? {question mark}, & {ampersand} You decide to use a regular expression to search for these words in all incoming emails.
