Topic 1, Case Study: 2OverviewExisting EnvironmentThis is a case study Case studies are not limed separately. You can use as much exam time at you would like to complete each case. However there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.To answer the questions included in a case study, you will need to reference information that is provided m the case study Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.At the end of the case study, a review screen will appear. This screen allows you to review your answers and to mate changes before you move to the next section of the exam, After you begin a new section, you cannot return to this section.To start the case studyTo display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment and problem statements. If the case study has an All Information tab, note that the information displayed on identical to the Information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.RequirementsContoso plans to improve its IT development and operations processes implementing Azue DevOps principles.Contoso has an Azure subscription and creates an Azure DevOPs organization.The Azure DevOps organization includes:* The Docker extension* A deployment pool named Pool7 that contains 10 Azure virtual machines that run Windows Server 2016.The Azure subscription contains an Azure

Automation account.Planned ChangesContoso plans to create projects in Azure DevOps as shown in the following table.Technical RequirementsContoso identifies the following technical requirements:
* Implement build agents for Project 1.
* Whenever possible, use Azure resources
* Avoid using deprecated technologies
* Implement a code flow strategy for Project2 that will:
* Enable Team 2 to submit pull requests for Project2.
* Enable Team 2 to work independently on changes to a copy of Project2?
* Ensure that any intermediary changes performed by Team2 on a copy of Project2 will be subject to the same restrictions as the ones defined in the build policy of Project2.
* Whenever possible, implement automation and minimize administrative effort.
* Implement Project3, Project5, Project6, and Project7 based on the planned changes.
* Implement Project4 and configure the project to push Docker images to Azure Container Registry.

NEW QUESTION: 2Your network contains an Active Directory domain named adatum.com and an Azure Active Directory (Azure AD) tenant named adatum.onmicrosoft.com.Adatum.com contains the user accounts in the following table.Adatum.onmicrosoft.com contains the user accounts in the following table.You need to implement Azure AD Connect. The solution must follow the principle of least privilege.Which user accounts should you use? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.

Answer: Explanation:Explanation:Box 1: User5In Express settings, the installation wizard asks for the following:AD DS Enterprise Administrator credentialsAzure AD Global Administrator credentialsThe AD DS Enterprise Admin account is used to configure your on-premises Active Directory. These credentials are only used during the installation and are not used after the installation has completed. The Enterprise Admin, not the Domain Admin should make sure the permissions in Active Directory can be set in all domains.Box 2: UserAAzure AD Global Admin credentials credentials are only used during the installation and are not used after the installation has completed. It is used to create the Azure AD Connector account used for synchronizing changes to Azure AD. The account also enables sync as a feature in Azure AD.
