NEW QUESTION: 1An administrator has deployed an application that uses 30 unique SQL statements with a maximum data source connection pool size of 10.What is the recommended prepared statement cache size for the application?**A. 0B. 1C. 2D. 3Answer: D**Explanation:To determine the highest value for your cache size to avoid any cache discards, add the number of uniquely prepared statements and callable statements, as determined by theSQL string, concurrency, and the scroll type, for each application that uses this data source on a particular server. This value is the maximum number of possible statements that can be cached on a given connection over the life of the server. Setting the cache size to this value means that you never have cache discards. In general, configure a larger cache for applications with a greater number of statements.

NEW QUESTION: 2

オンプレミスネットワークには、500GBのデータを格納するServer1という名前のファイルサーバーが含まれています。Server1からAzureStorageにデータをコピーするには、Azure DataFactoryを使用する必要があります。新しいデータファクトリを追加します。次に何をすべきですか？回答するには、回答領域で適切なオプションを選択します。

注：正しい選択はそれぞれ1ポイントの価値があります。**Answer: A**Explanation:ExplanationBox 1: Install a self-hosted integration runtimeThe Integration Runtime is a customer-managed data integration infrastructure used by Azure Data Factory to provide data integration capabilities across different network environments.Box 2: Create a pipelineWith ADF, existing data processing services can be composed into data pipelines that are highly available and managed in the cloud. These data pipelines can be scheduled to ingest, prepare, transform, analyze, and publish data, and ADF manages and orchestrates the complex data and processing dependencies References:
