Set-TransportConfig -JournalingReportNdrTo [email#160;protected] NOT D Set-SenderReputationConfig Use the Set-SenderReputationConfig cmdlet to modify the sender reputation configuration on a Mailbox server or an Edge Transport server. Sender reputation is part of the Exchange anti-spam functionality that blocks messages according to many characteristics of the sender. Sender reputation relies on persisted data about the sender to determine what action, if any, to take on an inbound message. The Protocol Analysis agent is the underlying agent for sender reputation functionality. When you configure anti-spam agents on an Exchange server, the agents act on messages cumulatively to reduce the number of unsolicited messages that enter the organization. Syntax EXAMPLE 1 This example makes the following modifications to the sender reputation configuration: It sets the sender reputation action to block all senders whose sender reputation level (SRL) rating exceeds the SRL threshold. It sets the SRL blocking threshold to 6. It sets the number of hours that senders are put on the blocked senders list to 36 hours.
