Just have a try our 200-201 exam questions, then you will know that you will be able to pass the 200-201 exam, Now, our 200-201 practice materials can help you achieve your goals.

NEW QUESTION: 1 Which two statements are true about the Oracle Cloud Infrastructure Object Storage Service? (Choose two.)
A. It provides strong consistency.
B. Data is stored redundantly across multiple availability domains (ADs).
C. It provides higher IOPS than Block Storage.
D. Data is stored redundantly only in a single AD.
E. It can be directly attached or detached from a compute instance.
Answer: A, B
Explanation: **STRONG CONSISTENCY** When a read request is made, Object Storage always serves the most recent copy of the data that was written to the system. **DURABILITY** Object Storage is a regional service. Data is stored redundantly across multiple storage servers. Object Storage actively monitors data integrity using checksums and automatically detects and repairs corrupt data. Object Storage actively monitors and ensures data redundancy. If a redundancy loss is detected, Object Storage automatically creates more data copies. For more details about Object Storage durability, see the Oracle Cloud Infrastructure Object Storage FAQ. **CUSTOM METADATA** You can define your own extensive metadata as key-value pairs for any purpose. For example, you can create descriptive tags for objects, retrieve those tags, and sort through the data. You can assign custom metadata to objects and buckets using the Oracle Cloud Infrastructure CLI or SDK. See Software Development Kits and Command Line Interface for details. **ENCRYPTION** Object Storage employs 256-bit Advanced Encryption Standard (AES-256) to encrypt object data on the server. Each object is encrypted with its own key. Data encryption keys are encrypted with a master encryption key that is frequently rotated. Encryption is enabled by default and cannot be turned off.

NEW QUESTION: 2 Which protocol can be used to access a shared directory on a network-attached storage device?
A. FCP
B. BGPC
C. SMB
D. SNMP
Answer: C
Explanation: Reference: https://en.wikipedia.org/wiki/Network-attached_storage

NEW QUESTION: 3 An engineer is designing a campus network with dedicated VLANs per access layer switch and wants to ensure that load sharing is supported. Which type of distribution to access link must be implemented to accomplish this configuration?
A. Layer 3
B. Layer 2
C.

spanned**D. sharedAnswer: D**
