**NEW QUESTION: 1**CORRECT TEXT :Exhibit:Which predefined protocol filter does the following information relate to?**Answer:** Explanation:appletalk

**NEW QUESTION: 2**Which statements about RSPAN are true? (Choose two.)**A.** RSPAN VLANs can carry RSPAN traffic only.**B.** only one RSPAN VLAN can be configured per device.**C.** RSPAN VLANs are exempt from VTP pruning.**D.** RSPAN uses are GRE tunnel to transmit captured traffic.**E.** MAC address learning is not supported**F.** It supports MAC address learning.**Answer: A,E**Explanation: Explanation/Reference:Explanation:The RSPAN VLAN carries SPAN traffic between RSPAN source and destination sessions. It has these special characteristics:All traffic in the RSPAN VLAN is always flooded.No MAC address learning occurs on the RSPAN VLAN.RSPAN VLAN traffic only flows on trunk ports.RSPAN VLANs must be configured in VLAN configuration mode by using the remote-span VLAN configuration mode command.STP can run on RSPAN VLAN trunks but not on SPAN destination ports.An RSPAN VLAN cannot be a private-VLAN primary or secondary VLAN.For VLANs 1 to 1005 that are visible to VLAN Trunking Protocol (VTP), the VLAN ID and its associated RSPAN characteristic are propagated by VTP. If you assign an RSPAN VLAN ID in the extended VLAN range (1006 to 4094), you must manually configure all intermediate switches.It is normal to have multiple RSPAN VLANs in a network at the same time with each RSPAN VLAN defining a network-wide RSPAN session. That is, multiple RSPAN source sessions anywhere in the network can contribute packets to the RSPAN session. It is also possible to have multiple RSPAN destination sessions throughout the network, monitoring the same RSPAN VLAN and presenting traffic to the user. The RSPAN VLAN ID separates the sessions.

**NEW QUESTION: 3**A company has 10 client computers that run Windows 8.1.An employee updates a device driver on her computer and then restarts the computer. Windows does not start successfully. You start the computer in Safe Mode.You need to identify the most recently installed driver and gather the maximum amount of information about the driver installation. What should you do?**A.** In Device Manager, run a scan for hardware changes.**B.** Display the contents of the Windowsinfsetupapi.dev.log file.**C.** In the Event Viewer console, display the

Hardware Events log. **D.** In the Programs and Features Control Panel item, display the installed updates. **Answer: B** Explanation: In Windows Vista and later versions of Windows, SetupAPI logs information about device installation in a plaintext log file that you can use to verify the installation of a device and to troubleshoot device installation problems. If a signing problem exists, SetupAPI will log information about the signing problem in the log file. The name of this log file is SetupAPI.dev.log, and it is located, by default, in the Windows INF file directory (%SystemRoot%\inf). The SetupAPI log for Windows Vista and later versions of Windows is an enhanced version of the SetupAPI log that is supported by Windows Server 2003, Windows XP, and Windows 2000. The SetupAPI log for Windows Vista and later versions of Windows includes an enhanced format that makes it easier for a reader to locate and understand the logged information.
