Which additional readiness check should you recommend to the team?**A.** Ensure that model performance is monitored**B.** Ensure that feature expectations are captured in the schema**C.** Ensure that training is reproducible**D.** Ensure that all hyperparameters are tuned
Answer: D

NEW QUESTION: 2Which of the following risks could result from inadequate software baselining?**A.** inadequate controls**B.** Sign-off delays**C.** Software integrity violations**D.** Scope creep**Answer: D**
Explanation:Explanation/Reference:Explanation:A software baseline is the cut-off point in the design and development of a system beyond which additional requirements or modifications to the design do not or cannot occur without undergoing formal strict procedures for approval based on a business cost-benefit analysis. Failure to adequately manage the requirements of a system through baselining can result in a number of risks. Foremost among these risks is scope creep, the process through which requirements change during development. Choices B, C and D may not always result, but choice A is inevitable.
