NEW QUESTION: 1 Which event occurs when a signature-based IDS encounters network traffic that triggers an alert?
A. NetFlow event **B.** connection event **C.** intrusion event **D.** endpoint event
Answer: C Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 2 A. Option B B. Option C C. Option D D. Option A
Answer: C Explanation: VLANs are local to each switch's database, and VLAN information is not passed between switches without implementing VLAN Trunk Protocol (VTP). Trunks carry traffic from all VLANs to and from the switch by default but, can be configured to carry only specified VLAN traffic. Trunk links are required to pass VLAN information between switches. So Sw11 port should be trunk not access port. Additionally, there are no ports assigned to VLAN 1.

NEW QUESTION: 3 App1という名前のAzureロジックアプリと、Queue1という名前のAzure Service Busキューがあります。
App1がQueue1からメッセージを読み取れることを確認する必要があります。App1は、Azure Active Directory (Azure AD) を使用して認証する必要があります。
あなたは何をすべきか？回答するには、回答領域で適切なオプションを選択します。
注：それぞれの正しい選択は1ポイントの価値があります。
Answer: Explanation: Explanation: On App1: Turn on the managed identity To use Service Bus with managed identities, you need to assign the identity the role and the appropriate scope. The procedure in this section uses a simple application that runs under a managed identity and accesses Service Bus resources. Once the application is created, follow these steps: * Go to Settings and select Identity. * Select the Status to be On. * Select Save to save the setting. On Queue1: Configure Access Control (IAM) Azure Active Directory (Azure AD) authorizes access rights to secured resources through role-based access control (RBAC). Azure Service Bus defines a set of built-in RBAC roles that encompass common sets of permissions used to access Service Bus entities and you can also

define custom roles for accessing the data. Assign RBAC roles using the Azure portal. In the Azure portal, navigate to your Service Bus namespace. Select Access Control (IAM) on the left menu to display access control settings for the namespace. If you need to create a Service Bus namespace, select the Role assignments tab to see the list of role assignments. Select the Add button on the toolbar and then select Add role assignment.
