After you have finished learning a part, you can choose a new method **New 1z0-1119-1 Exam Duration** according to your own situation, ITbraindumps provides you a perfect study guide which almost contains all knowledge points.

NEW QUESTION: 1 According to its corporate security policy, ABC Company is creating a 'WLAN Security and Performance' checklist to assure that all autonomous access point deployments are consistently secure and maximize performance. What item does not belong on such a checklist?
A. 802.1X/EAP is in use
B. WIPS mode is enabled on each AP
C. Cipher suite is CCMP
D. Preauthentication is enabled
E. Default passwords are changed
Answer: B
Explanation: While APs may have scanning capabilities that allow them to report the presence of an unauthorized device and the status of the RF environment around them, autonomous APs do not have a 'WIPS mode.' CCMP is specified by the 802.11i amendment as the default cipher suite, and is presently unbreakable. Autonomous APs have many management interfaces such as HTTP, telnet, console, and SNMP. Each of these management interfaces supports a default user login. The default user login parameters should be changed prior to deployment. Preauthentication is specified by the 802.11i amendment to speed authentication with new APs by allowing client devices to authenticate to APs to which they expect to roam. 802.1X/EAP provides a scalable authentication method capable of supporting tunneled client authentication data. 802.1X/EAP is the most common authentication scheme in enterprise WLANs today.

NEW QUESTION: 2 A customer recently installed a Cisco TelePresence MCU 5320. The customer wants a virtual meeting room that restricts participants from communicating before the customer joins the call. Which feature in the MCU enables this functionality?
A. Owner
B. Floor and chair control
C. PIN codes
D. Numeric ID
Answer: D
Explanation:

https://www.cisco.com/c/dam/en/us/td/docs/telepresence/infrastructure/mcu/user_guide/Cisco_TelePresence_MCU_5300_Series_Tutorial.pdf

NEW QUESTION: 3 **A.** Error-prototype = CustomError; **B.** CustomError ["ErrorType"] = Error; **C.** CustomError.prototype = true; **D.** CustomError.prototype = Error.prototype; **Answer: D**
Explanation: * Object.prototype.constructor Returns a reference to the Object function that created the instance's prototype. Note that the value of this property is a reference to the function itself, not a string containing the function's name. The value is only read-only for primitive values such as 1, true and "test". * The constructor property is created together with the function as a single property of func.prototype. Reference: Object.prototype.constructor
