**NEW QUESTION: 1** A new piece of ransomware got installed on a company's backup server which encrypted the hard drives containing the OS and backup application configuration but did not affect the deduplication data hard drives. During the incident response, the company finds that all backup tapes for this server are also corrupt. Which of the following is the PRIMARY concern?  
**A.** Preventing the ransomware from re-infecting the server upon restore  
**B.** Restoring the data will be difficult without the application configuration  
**C.** Validating the integrity of the deduplicated data  
**D.** Determining how to install HIPS across all server platforms to prevent future incidents  
**Answer: B**  
**Explanation:** Ransomware is a type of malware that restricts access to a computer system that it infects in some way, and demands that the user pay a ransom to the operators of the malware to remove the restriction. Since the backup application configuration is not accessible, it will require more effort to recover the data. Eradication and Recovery is the fourth step of the incident response. It occurs before preventing future problems.

**NEW QUESTION: 2** You need to design a solution to meet the SQL Server storage requirements for CONT\_SQL3. Which type of disk should you recommend?
