NEW QUESTION: 1Which of the following can be used as a covert channel?**A.** Storage and low bits.**B.** Storage and permissions.**C.** Storage and timing.**D.** Storage and classification.**Answer: C**
Explanation:Those are the proper elements, you can use these two to achieve a covert channel. Low bits is not a term related to covert channels. Permissions are related to authentication, they do not achieve what the question wants. Also, classification is could not selected as a correct choice.Check your official CISSP documentation to see what can be used as a covert channel."An active variation on eavesdropping is called Covert Channel eavesdropping, which consists of using a hidden unauthorized network connection to communicate unauthorized information. A Covert Storage Channel operates by writing information to storage by one process and then reading by using another process from a different security level. A Covert Timing Channel signals information to another process by modulating its own resource use to affect the response time of another." Pg. 101 Krutz: The CISSP Prep Guide: Gold Edition

NEW QUESTION: 2You have defined a mobile backend to contain one custom API and two connectors that are used by three roles and six users. Two clients are configured to be able to remotely access the mobile backend to view analytics data about mobile application usage. When you export the backend, which three items are included in the package? (Choose three.)**A.** analytics**B.** users**C.** roles**D.** connectors**E.** custom APIs**Answer: C,D,E**

NEW QUESTION: 3What are two Cisco IOS commands that can be used to view neighbor adjacencies? (Choose two.)**A.** show ip ospf interfaces**B.** show ip ospf database**C.** show ip ospf protocols**D.** show ip ospf neighbors**Answer: A,D**
Explanation:Explanation The output of these commands are shown below:Notice that for the "show ip ospf interface" command, the "Neighbor Count" is the number of OSPFneighbors discovered on this interface while the "Adjacent neighbor count" is the number of routers running OSPF that are fully adjacent with this router. Adjacent means that their databases are fully synchronized. In this example, this router has one neighbor on its Ethernet0 interface.
