**NEW QUESTION: 1**An unchecked exception occurs in a method `dosomething()` Should other code be added in the `dosomething()` method for it to compile and execute?  
**A.** The Exception must be caught  
**B.** The Exception must be declared to be thrown.  
**C.** The Exception must be caught or declared to be thrown.  
**D.** No other code needs to be added.  
**Answer: D**  
**Explanation:** Explanation/Reference:Explanation:Because the Java programming language does not require methods to catch or to specify unchecked exceptions (`RuntimeException`, `Error`, and their subclasses), programmers may be tempted to write code that throws only unchecked exceptions or to make all their exception subclasses inherit from `RuntimeException`. Both of these shortcuts allow programmers to write code without bothering with compiler errors and without bothering to specify or to catch any exceptions. Although this may seem convenient to the programmer, it sidesteps the intent of the catch or specify requirement and can cause problems for others using your classes.

**NEW QUESTION: 2**As the request of sales management, you have created a custom Web tab for Sales Representatives in your organization.What area of the application will you use to grant all Sales Representatives access to the new tab?
