**NEW QUESTION: 2** SIMULATION Central Florida Widgets recently installed a new router in their office. Complete the network installation by performing the initial router configurations and configuring RIPv2 routing using the router command line interface (CLI) on the R2. Configure the router per the following requirements:- Name of the router is R2- Enable.secret password is cisco- The password to access user EXEC mode using the console is cisco2- The password to allow telnet access to the router is cisco3 IPv4 addresses must be configured as follows:- Ethernet network 209.165.201.0/27 - router has fourth assignable host address in subnet- Serial network is 192.0.2.176/28 - router has last assignable host address in the subnet.- Interfaces should be enabled.- Router protocol is RIPv2  
**Attention:** In practical examinations, please note the following, the actual information will prevail.  
1 . Name of the router is xxx2 . Enable. secret password is xxx3 . Password In access user EXEC mode using the console is xxx4 . The password to allow telnet access to the router is xxx5 . IP information  
**Answer:** Explanation: See Explanation/Reference: Explanation: Step 1: Click on the console host, you will get a pop-up screen CLI of Router. Router> Configure the new router as per the requirements provided in Lab question Requirement 1: Name of the router is R2 Step 2: To change the hostname of the router to R2 follow the below steps: Requirement 2: Enable-secret password is cisco1 Step 3: To set the enable secret password to cisco1 use the following command R2(config)#enable secret cisco1 Requirement 3: The password to access user EXEC mode using the console is cisco2 Step 4: We need to configure the line console 0 with the password cisco2 Also remember to type login command after setting up the password on line con 0 which allows router to accept logins via console. Requirement 4: The password to allow telnet access to the router is cisco3 Step 5: To allow telnet access we need to configure the vty lines 0 4 with the password cisco3 Also remember to type login command after setting up the password on line vty 0 4 which allows router to accept logins via telnet. Requirement 5: (5.1) Ethernet network 209.165.201.0 /27 - Router has the fourth assignable host address in subnet. (5.2) Serial Network is 192.0.2.176 /28 - Router has the last assignable host address in subnet. Step 6: Ethernet network 209.165.201.0 /27 - Router has the fourth assignable host address in subnet. Ethernet Interface on router R2 is Fast Ethernet 0/0 as per the exhibit First we need to identify the subnet mask Network: 209.165.201.0 /27 Subnet mask: /27: 27 bits = 8 + 8 + 8 + 3 = 8(bits). 8(bits). 8(bits) .11100000 (3bits) = 255.255.255.11100000 = 11100000 = 128+64+32+0+0+0+0+0 = 224 Subnet mask: 255.255.255.224 Different subnet networks and their valid first and last assignable host address range for above subnet mask are Subnet Networks ::::: Valid Host address range ::::: Broadcast address

 table information for network 192.0.2.176 /28 to identify First assignable host address:  
 192.0.2.177 Last assignable host address: 192.0.2.190 We need to configure Last assignable host  
 address (192.0.2.190) on serial 0/0/0 using the subnet mask 255.255.255.240 Requirement 6: To  
 enable interfaces Use no shutdown command to enable interfaces Requirement 7: Router  
 protocol is RIPv2 Step 8: Need to enable RIPv2 on router and advertise its directly connected  
 networks R2(config)#router rip To enable RIPv2 routing protocol on router use the command  
 version 2 R2(config-router)#version 2 Optional: no auto-summary (Since LAB networks do not  
 have discontinuous networks) RIPv2 is classless, and advertises routes including subnet  
 masks, but it summarizes routes by default. So the first things we need to do when configuring  
 RIPv2 is turn off auto-summation with the router command no auto-summary if you must  
 perform routing between disconnected subnets. R2 (config-router) # no auto-summary  
 Advertise the serial 0/0/0 and fast Ethernet 0/0 networks into RIPv2 using network command  
 Step 9: Important please do not forget to save your running-config to startup-config R2# copy  
 running-config startup-config
