And we will send it to you in 5 to 10 minutes after your paid successfully.

NEW QUESTION: 1 A company uses Microsoft 365 Business to address its compliance needs. A customer requests a complete disclosure of all personal data that relates to them. You need to create a new data subject request (DSR) case and ensure that compliance managers can view all DSR case findings. In which two areas must you perform actions? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer: Explanation:

NEW QUESTION: 2 A BIG-IP has two load balancing virtual servers at 150.150.10.10:80 and 150.150.10.10:443. The port 80 virtual server has SNAT automap configured. There is also a SNAT configured at 150.150.10.11 set for a source address range of 200.200.1.0 / 255.255.255.0. All other settings are at their default states. If a client with the IP address 200.200.1.1 sends a request to https://150.150.10.10, what is the source IP address when the associated packet is sent to the pool member? **A.** Floating self IP address on VLAN where the packet arrives on the system **B.** 150.150.10.11 **C.** Floating self IP address on VLAN where the packet leaves the system **D.** 200.200.1.1 **Answer: B**

NEW QUESTION: 3 The DAI feature has been implemented in the ACME switched LAN. Which three statements are true about the dynamic ARP inspection (DAI) feature? (Select three) **A.** DAI can be performed on both ingress and egress ports. **B.** DAI should be configured on all access switch ports as untrusted and on all switch ports connected to other switches as trusted. **C.** DAI is supported on access ports, trunk ports, EtherChannel ports, and private VLAN ports. **D.** DAI can be performed on ingress ports only. **E.** DAI is supported on access and trunk ports only. **F.** DAI should be enabled on the root switch for particular VLANs only in order to secure the ARP caches of hosts in the domain. **Answer: B, C, D** Explanation: To prevent ARP spoofing or "poisoning," a switch must ensure that only valid ARP requests and responses are relayed. DAI prevents these attacks by intercepting and validating all ARP requests and responses. Each intercepted ARP reply is verified for valid MAC-address-to-IP-address bindings before it is forwarded to a PC to update the ARP cache. ARP replies coming from invalid devices are dropped. DAI determines the validity of an ARP packet based on a valid MAC-address-to-IP-address bindings database built by DHCP snooping. In addition, to handle

hosts that use statically configured IP addresses, DAI can also validate ARP packets against user-configured ARP ACLs. To ensure that only valid ARP requests and responses are relayed, DAI takes these actions:

NEW QUESTION: 4 Which part of the Inbound SOAP is responsible for sending responses to incoming requests?
A. Output Requirements
B. Exception Resume Configuration
C. Output Configuration
D. Input Configuration
Answer: C
