NEW QUESTION: 1DRAG DROPYou have a System Center 2012 R2 infrastructure that has Operations Manager installed.Your company is testing a custom application named App1. App1 is deployed to a test server named Server1. Server1 runs Windows Server 2012 R2.You push the Operations Manager agent to Server1 and you start to receive alerts from Server1.You need to give a team of developers historical traces of App1. The developers will store the traces in Team Foundation Server (TFS).Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:

NEW QUESTION: 2

インターネットから組織のイントラネットに接続する場合、不正アクセスに対するセキュリティは、次のものを使用することによって最もよく達成されます。**A.** 暗号化**B.** ルーターのスクリーニング**C.** 仮想プライベートネットワーク (VPN) **D.** プロキシサーバー。

Answer: B

NEW QUESTION: 3Which type of NAT is used where you translate multiple internal IP addresses to a single global, routable IP address?**A.** dynamic NAT**B.** dynamic PAT**C.** static NAT **D.** policy NAT**E.** policy PAT**Answer: B**Explanation:

http://www.cisco.com/en/US/docs/security/asa/asa82/configuration/guide/nat_dynamic.html
Task Flow for Configuring Dynamic NAT and PATUse the following guidelines to configure either Dynamic NAT or PAT:First configure a nat command, identifying the real addresses on a given interface that you want to translate.Then configure a separate global command to specify the mapped addresses when exiting another interface. (In the case of PAT, this is one address.) Each nat command matches a global command by comparing the NAT ID, a number that you assign to each command. Note The configuration for dynamic NAT and PAT are almost identical; for NAT you specify a range of mapped addresses, and for PAT you specify a single address. Figure 29-9 shows a typical dynamic NAT scenario. Only translated hosts can create a NAT session, and responding traffic is allowed back. The mapped address is dynamically assigned from a pool defined by the global command.Figure 29.9 Dynamic NATFigure 29-10

shows a typical dynamic PAT scenario. Only translated hosts can create a NAT session, and responding traffic is allowed back. The mapped address defined by the global command is the same for each translation, but the port is dynamically assigned. Figure 29-10 Dynamic PAT
