NEW QUESTION: 1The network administrator at an enterprise reported a large data leak. One compromised server was used to aggregate data from several critical application servers and send it out to the Internet using HTTPS. Upon investigation, there have been no user logins over the previous week and the endpoint protection software is not reporting any issues. Which of the following BEST provides insight into where the compromised server collected the information?**A.** Configure the server logs to collect unusual activity including failed logins and restarted services.**B.** Correlate data loss prevention logs for anomalous communications from the server.**C.** Setup a packet capture on the firewall to collect all of the server communications.**D.** Review the flow data against each server's baseline communications profile.**Answer: D**
Explanation:Network logging tools such as Syslog, DNS, NetFlow, behavior analytics, IP reputation, honeypots, and DLP solutions provide visibility into the entire infrastructure. This visibility is important because signature-based systems are no longer sufficient for identifying the advanced attacker that relies heavily on custom malware and zero-day exploits. Having knowledge of each host's communications, protocols, and traffic volumes as well as the content of the data in question is key to identifying zero-day and APT (advance persistent threat) malware and agents.Data intelligence allows forensic analysis to identify anomalous or suspicious communications by comparing suspected traffic patterns against normal data communication behavioral baselines.Automated network intelligence and next-generation live forensics provide insight into network events and rely on analytical decisions based on known vs. unknown behavior taking place within a corporate network.

NEW QUESTION: 2Refer to the exhibit. A network associate has configured OSPF with the command:City(config-router)# network 192.168.12.64 0.0.0.63 area 0After completing the configuration, the associate discovers that not all the interfaces are participating in OSPF. Which three of the interfaces shown in the exhibit will participate in OSPF according to this configuration statement? (Choose three.)**A.** FastEthernet0 /0**B.** Serial0/0**C.** Serial0/1.103**D.** FastEthernet0 /1**E.** Serial0/1.104**F.** Serial0/1.102**Answer: B,D,F**
Explanation/Reference:Explanation:The "network 192.168.12.64 0.0.0.63 equals to network 192.168.12.64/26. This network has:+ Increment: 64 (/26= 1111 1111.1111 1111.1111 1111.1100 0000) + Network address:192.168.12.64+ Broadcast address: 192.168.12.127Therefore all

interface in the range of this network will join OSPF.
