The main points have been concluded by our professional [1D0-671](#) experts, Come on, please believe yourself as everything has not settled yet and everything has still in time.

NEW QUESTION: 1 A client, using a workflow in AEM Assets involving several participant steps, would like to create a new version of the asset before each participant step. What is the simplest workflow strategy for achieving this goal?
A. Modify the description of each participant step to instruct the user to create a new version of the asset in AEM before completing the step.
B. Modify the current workflow by adding the "Create Version" workflow process step before each of the existing participant steps.
C. Develop a custom participant step that programmatically creates a new version of the asset and replace each participant step with this step.
D. Develop a custom workflow process to programmatically create a new version of the asset and add this step before each participant step.
Answer: A

NEW QUESTION: 2 You are implementing a Windows Communication Foundation (WCF) service contract named `IContosoService` in a class named `ContosoService`. The service occasionally fails due to an exception being thrown at the service. You need to send the stack trace of any unhandled exceptions to clients as a fault message. What should you do?
A. In the application configuration file on the service and all the clients, add the following XML segment to the `system.diagnostics/sources` configuration section group:

```
<source name="System.ServiceModel" switchValue="Error" propagateActivity="true"> <listeners> <add name="ServiceModelTraceListener" initializeData="appntracelog.svclog" type="System.Diagnostics.XmlWriterTraceListener" /> </listeners> </source>
```

B. Apply the following attribute to the `ContosoService` class:
`[ServiceBehavior(IncludeExceptionDetailInFaults = true)]`
C. For each `OperationContract` exposed by `IContosoService`, apply the following attribute:
`[FaultContract(typeof(Exception))]`
D. In the application configuration file on the client, add the following XML segment to the `system.serviceModel/behaviors` configuration section group:

```
<endpointBehaviors> <behavior name="debug"> <callbackDebug includeExceptionDetailInFaults="true" /> </behavior> </endpointBehaviors>
```

Associate the debug behavior with any endpoints that need to return exception details.
Answer: B
Explanation: `ServiceBehaviorAttribute.IncludeExceptionDetailInFaults` Property Gets or sets a value that specifies that general unhandled execution exceptions are to be converted into a `System.ServiceModel.FaultException<TDetail>` of type `System.ServiceModel.ExceptionDetail` and sent as a fault message. Set this to true only during development to troubleshoot a service.

NEW QUESTION: 3

顧客は、起動時に適切な* (A_TIME) にメッセージが作成された時刻 (message_time_of_creation) を入力するメッセージシナリオの設定について支援を求めています。

この要件をサポートするには、メッセージパターンの件名と本文に何を入力する必要がありますか？**A.**

メッセージの件名は{message_time_of_creation}である必要があります。メッセージ本文は{A_TIME}でなければなりません。**B.** メッセージの件名は{A_TIME}である必要があります。

メッセージ本文は{message_time_of_creation}である必要があります。**C.**

メッセージの件名は、message_time_of_creationである必要があります。メッセージ本文はA

Related Posts TIMEである必要があります。**D.**

メッセージの件名は{A_TIME}である必要があります。

メッセージ本文は、message_time_of_creationである必要があります。**E.**

メッセージの件名はA.TIMEである必要があります。

メッセージ本文は{message_time_of_creation}である必要があります。**Answer: D**
