NEW QUESTION: 2To complete the sentence, select the appropriate option in the answer area.**Answer:** Explanation:

NEW QUESTION: 3In the frame relay network, what are the correct descriptions about the bandwidth control parameters?(multiple choice)**A.** Bc is the amount of data that the network allows users to transmit at CIR rate Tc intervals. They are related to $Tc=Bc/CIR$.**B.** Be is the amount of data that the network allows users to transmit more than Bc during the Tc interval.**C.** If the user transmits information at a rate less than or equal to CIR, the transmission of this part of information should be guaranteed.**D.** CIR is the rate of user information transmission agreed by the network and the user, that is, the committed information rate.**Answer: A,B,C,D**

NEW QUESTION: 4You need to support the message processing for the ocean transport workflow.Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:References:

<https://docs.microsoft.com/bs-latn-ba/azure/logic-apps/logic-apps-enterprise-integration-metadata>Topic 3, City Power & LightBackgroundCity Power & Light company provides electrical infrastructure monitoring solutions for homes and businesses. The company is migrating solutions to Azure.Current environmentArchitecture OverviewThe company has a public website located at <http://www.cpandl.com/>. The site is a single-page web application that runs in Azure App Service on Linux. The website uses files stored in Azure Storage and cached in Azure Content Delivery Network (CDN) to serve static content.API Management and Azure Function App functions are used to process and store data in Azure Database for PostgreSQL. API Management is used to broker communications to the Azure Function app functions for Logic app integration. Logic apps are used to orchestrate the data processing while Service Bus and Event Grid handle messaging and events.The solution uses Application Insights, Azure Monitor, and Azure Key Vault.Architecture diagramThe company has several applications and services that support their business. The company plans to implement serverless computing where possible. The overall architecture is shown below.User authenticationThe following steps detail the user authentication process:The user selects Sign in in the website.The browser redirects the user to the Azure Active Directory (Azure AD) sign in page.The user signs in.Azure

AD redirects the user's session back to the web application. The URL includes an access token. The web application calls an API and includes the access token in the authentication header. The application ID is sent as the audience ('aud') claim in the access token. The back-end API validates the access token. Requirements Corporate website Communications and content must be secured by using SSL. Communications must use HTTPS. Data must be replicated to a secondary region and three availability zones. Data storage costs must be minimized. Azure Database for PostgreSQL The database connection string is stored in Azure Key Vault with the following attributes: Azure Key Vault name: cpandlkeyvault Secret name: PostgreSQLConnId: 80df3e46ffcd4f1cb187f79905e9a1e8 The connection information is updated frequently. The application must always use the latest information to connect to the database. Azure Service Bus and Azure Event Grid Azure Event Grid must use Azure Service Bus for queue-based load leveling. Events in Azure Event Grid must be routed directly to Service Bus queues for use in buffering. Events from Azure Service Bus and other Azure services must continue to be routed to Azure Event Grid for processing. Security All SSL certificates and credentials must be stored in Azure Key Vault. File access must restrict access by IP, protocol, and Azure AD rights. All user accounts and processes must receive only those privileges which are essential to perform their intended function. Compliance Auditing of the file updates and transfers must be enabled to comply with General Data Protection Regulation (GDPR). The file updates must be read-only, stored in the order in which they occurred, include only create, update, delete, and copy operations, and be retained for compliance reasons. Issues Corporate website While testing the site, the following error message displays: CryptographicException: The system cannot find the file specified. Function app You perform local testing for the RequestUserApproval function. The following error message displays: 'Timeout value of 00:10:00 exceeded by function: RequestUserApproval' The same error message displays when you test the function in an Azure development environment when you run the following Kusto query: FunctionAppLogs | where FunctionName == "RequestUserApproval" Logic app You test the Logic app in a development environment. The following error message displays: '400 Bad Request' Troubleshooting of the error shows an HttpTrigger action to call the RequestUserApproval function. Code Corporate website Security.cs: Function app RequestUserApproval.cs:
