In addition, if you want to use the Salesforce-Certified-Administrator exam test engine offline, online test engine can be your best choice.

NEW QUESTION: 1What happens when you click Run Form Debug in Forms Builder?**A.** The form runs in a simulated three-tier environment by using an applet viewer that is included with the product to enable debugging.**B.** The form runs in a three tier environment by using the [debug] configuration in the FORMSWEB.CFG file.**C.** The form runs in a three-tier environment by using the application server URL that you specify in runtime preferences.**D.** The form runs on your local machine by using a debug executable client.**Answer: C****Explanation:** Explanation/Reference:Explanation:Directly from the class materials from Oracle: As in the case when you run a form from Forms Builder with the Run Form button, the Run Form Debug button runs the form in a three-tier environment. It takes its settings from the Preferences window that you access by selecting Edit > Preferences from the main menu and clicking the Runtime tab.

NEW QUESTION: 2An organization has created multiple components of a single application for compartmentalization. Currently all the components are hosted on a single EC2 instance. Due to security reasons the organization wants to implement two separate VPCs for the separate modules although it is already using VPC. How can the organization achieve this with a single instance?**A.** Create a VPC instance which will have both the ACL and the security group attached to it and have separate rules for each IP address.**B.** Create a VPC instance which will have multiple network interfaces with multiple elastic IP addresses.**C.** You have to launch two instances each in a separate subnet and allow VPC peering for a single IP.**D.** Create a VPC instance which will have multiple subnets attached to it and each will have a separate IP address.**Answer: B****Explanation:**A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. With VPC the user can specify multiple private IP addresses for his

instances. The number of network interfaces and private IP addresses that a user can specify for an instance depends on the instance type. With each network interface the organization can assign an EIP. This scenario helps when the user wants to host multiple websites on a single EC2 instance by using multiple SSL certificates on a single server and associating each certificate with a specific EIP address. It also helps in scenarios for operating network appliances, such as firewalls or load balancers that have multiple private IP addresses for each network interface.
