NEW QUESTION: 4**A.** Option C**B.** Option B**C.** Option A**D.** Option D**Answer: C, D****Explanation:**NIC teaming, also known as Load Balancing/Failover (LBFO), allows multiple network adapters to be placed into a team for the purposes of bandwidth aggregation, and/or traffic failover to maintain connectivity in the event of a network component failure. This feature has long been available from NIC vendors but until now NIC teaming has not been included with Windows Server. Do I have to select a standby member to get fault tolerance (failover)? No. IN any team with two or more network adapters if a network adapter fails in an Active/Active configuration,

the traffic on that network adapter will gracefully failover to the other network adapters in the team even if none of the other adapters are in standby mode. Number of NICs in a team in a native host NIC teaming requires the presence of at least one Ethernet NIC. A team of one NIC may be used for separation of traffic using VLANs. Obviously a team with only one team member has no failure protection. Fault protection (failover) requires a minimum of two Ethernet NICs in the team. The Windows Server 2012 implementation supports up to 32 NICs in a team. Number of team interfaces for a team Windows Server 2012 supports up to 32 team interfaces.
