NEW QUESTION: 1What is the benefit of using the Communication Profile Editor to modify users?
A. It allows an administrator to change the values of the Session Manager profile settings for only a single SIP System Manager users at one time
B. It allows an administrator to change all the values of a User Profile for multiple users at one time
C. It allows an administrator to change all the values of a User Profile for multiple SIP users at one time
D. It allows an administrator to change all the values of the Communication Profile settings for multiple SIP System Manager users at one time
E. It allows an administrator to change the values of the Session Manager profile settings for only a single SIP System Manager user at one time
Answer: A

NEW QUESTION: 2An organization is considering an ATP: Endpoint and network deployment with multiple appliances.Which from factor will be the most effective in terms of performance and costs?
A. Virtual for management and ATP: Endpoint, virtual for the network scanner.
B. Virtual for management, physical for the network scanner and ATP: Endpoint
C. Virtual for management, ATP, Endpoint the network scanners
D. Virtual for management and ATP: Endpoint, physical for the network scanners
Answer: C

NEW QUESTION: 3Refer to the exhibit.A customer has two Cisco Unified Communication manager 9.X clusters that serve the same location. An engineer has attempted to set up Enhanced Location call admission control so that any call within a site between phones on the two clusters do not decrement the available bandwidth to and from that site. However, the real time monitoring tool currently shows bandwidth being used from the site to Hub_none. When a call is placed between phones at the site, which action must be taken to correct this situation?
A. The Hub_none location must have a link configured to the shadow location.
B. The hub_none location must have a link configuration to the phantom location.
C. The link between clusters must be a type of inter-cluster trunk instead of a sip trunk.
D. The device pool names must match between clusters.
E. The SIP trunks should be changed to use the shadow location.
Answer: E
Explanation:ExplanationShadow is a new system location created for intercluster Enhanced Location CAC. In order to pass location information across clusters, the SIP ICT needs to be assigned to the system location Shadow.The system location Shadow:* Is a valid location only for a SIP ICT. Devices other than SIP trunks assigned incorrectly to the Shadow location are treated as if assigned to the Hub_None location.* Cannot have a link connecting to other user defined locations, so bandwidth cannot be deducted between the Shadow location and other

user defined locations.* Has no intra-location bandwidth capacities, so bandwidth cannot be deducted within the Shadow location.
