NEW QUESTION: 2

ユーザーが3つのインスタンスを持つELBを作成しました。デフォルトでELBはいくつのセキュリティグループを作成しますか? **A. 0** **B. 1** **C. 2** **D. 3** **Answer: C** Explanation: Explanation Elastic Load Balancing provides a special Amazon EC2 source security group that the user can use to ensure that back-end EC2 instances receive traffic only from Elastic Load Balancing. This feature needs two security groups: the source security group and a security group that defines the ingress rules for the back-end instances. To ensure that traffic only flows between the load balancer and the back-end instances, the user can add or modify a rule to the back-end security group which can limit the ingress traffic. Thus, it can come only from the source security group provided by Elastic Load Balancing.
